

Viewing Task.

- 144 trials.
- 2 blocks of 72 trials each, randomized.
- \$25 show up. \$10 bonus, used in task.

	High block			Low block		
Probs	1	$\frac{2}{3}$	$\frac{1}{3}$	$\frac{2}{3}$	$\frac{1}{3}$	0
Trials	24	24	24	24	24	24
WTP prompt	1	24	1	1	24	1

With 92.3% prob, this pie will be $\frac{2}{3}$.
WTP (\$1-5)?

(1) fMRI tests remain the same.

(2) Model predictions (Info pref test):

$$WTP_L > WTP_H$$

(3) Model predictions (Outcome test):

$$Frac(\text{reward} \mid pr = \frac{1}{3}) \gtrless Frac(\text{reward} \mid pr = 1)$$

$$Frac(\text{no reward} \mid pr = \frac{1}{3}) \gtrless Frac(\text{no reward} \mid pr = 0)$$

$\frac{1}{2}$ subjects on reward fractals,

$\frac{1}{2}$ subjects on no reward fractals.

00 subjects only need to learn 2 fractals!
